

Sr. Scientist I /II - Pharmacology

Job ID

REQ-10078539

May 22, 2026

LOC_US

About the Role

Key responsibilities

- Execute preclinical in vivo studies, including dosing, tumor implantation, monitoring, and tissue and blood collection, following standard operating procedures.
- Develop and apply in vivo oncology models to assess antitumor activity, biomarkers, and pharmacokinetic and pharmacodynamic relationships.
- Design, optimize, troubleshoot, and analyze multicolor flow cytometry panels to characterize tumor and peripheral immune responses.
- Perform ex vivo and in vitro workflows, including cell culture, tumor cell preparation, and tissue processing into single-cell suspensions.
- Generate and interpret high-quality datasets using flow cytometry analysis software and GraphPad Prism for visualization and summaries.
- Maintain accurate experimental documentation in an electronic laboratory notebook and contribute to study reports and presentations.
- Collaborate across functions to communicate findings clearly, support study planning, and advance oncology discovery priorities.

Essential requirements

- Bachelor's or Master's degree in Immunology, Biology, or a related scientific field, with relevant laboratory experience.
- Hands-on experience with mouse in vivo studies, including dosing, tumor implantation, monitoring, and tissue collection.
- Experience working with oncology in vivo models, including xenograft or syngeneic systems.
- Strong multicolor flow cytometry expertise, including panel design, optimization, troubleshooting, and data analysis.
- Experience with flow cytometry analysis software such as FlowJo.
- Demonstrated ability to execute experiments independently while producing high-quality, reproducible data.
- Strong data interpretation skills and the ability to present results clearly in a multidisciplinary setting.
- Strong attention to detail, organization, and a collaborative, proactive working style.

Desirable requirements

- Experience establishing cell line-derived xenograft, patient-derived xenograft, or syngeneic tumor models for oncology studies.
- Experience with immune profiling of tumors and secondary lymphoid organs using multicolor flow cytometry.

Novartis Compensation and Benefit Summary:

The salary for this position is expected to range between \$93,800.00 - 174,200.00 USD Annual per year.

The final salary offered is determined based on factors like, but not limited to, relevant skills and experience, and upon joining Novartis will be reviewed periodically. Novartis may change the published salary range based on company and market factors.

Your compensation will include a performance-based cash incentive and, depending on the level of the

role, eligibility to be considered for annual equity awards.

US-based eligible employees will receive a comprehensive benefits package that includes health, life and disability benefits, a 401(k) with company contribution and match, and a variety of other benefits. In addition, employees are eligible for a generous time off package including vacation, personal days, holidays and other leaves.

Role Requirements
