About the Role

Key Responsibilities

- Design and maintain secure, scalable CI/CD pipelines across cloud, application, data, and AI platforms.
- Embed security controls throughout development, testing, deployment, and production operations.
- Integrate code quality, vulnerability scanning, and compliance checks into automated delivery pipelines.
- Implement Infrastructure as Code solutions for consistent, repeatable, and auditable environments.
- Build and support containerized deployments using Kubernetes and cloud-native technologies.
- Enable secure cloud architectures across compute, networking, identity, monitoring, and storage services.
- Drive vulnerability management through identification, prioritization, remediation, and continuous risk reduction.
- Implement observability, monitoring, logging, and alerting across applications, infrastructure, and security domains.
- Establish secure release management practices, deployment governance, and operational resilience standards.
- Mentor engineering teams on DevSecOps, cloud security, automation, and secure software delivery practices.

Essential Requirements

- Bachelor's or Master's degree in Computer Science, Information Technology, Engineering, Cybersecurity, or a related field.
- 8+ years of experience in DevSecOps, Cloud Engineering, Platform Engineering, Site Reliability Engineering, or Application Security.
- Strong experience designing and managing enterprise-scale Continuous Integration and Continuous Delivery pipelines.
- Hands-on expertise implementing security controls including code analysis, dependency scanning, container security, and compliance validation.
- Deep knowledge of cloud platforms, Infrastructure as Code, containerization, Kubernetes, and deployment automation.
- Strong scripting, automation, problem-solving, and stakeholder communication skills in complex enterprise environments.
