LOC_SA

About the Role

Major accountabilities:

- Execute medical expert engagement plans aligned with therapeutic area strategy through credible, unbiased, peer-to-peer scientific exchange.
- Build and maintain strong scientific relationships with healthcare professionals and medical experts to support long-term collaboration and trust.
- Share, contextualize, and discuss emerging clinical data, publications, and therapeutic insights to address scientific questions and evidence gaps.
- Support medical education activities, including hospital meetings and scientific events, in alignment with medical strategy.
- Systematically collect, synthesize, and communicate high-quality external insights from clinical practice and scientific discussions.
- Contribute to evidence generation by supporting study site identification, site interactions, and clinical research activities.
- Inform local and regional medical strategy through real-world feedback, unmet needs identification, and insight sharing.
- Provide scientific support and clinical data interpretation to internal stakeholders across Medical, Commercial, and Value & Access teams.
- Represent Novartis as a credible scientific ambassador, strengthening the medical ecosystem and therapeutic area leadership.
- Ensure full compliance with ERC, governance, regulatory requirements, and accurate CRM documentation across all activities.

Requirements:

- Advanced scientific degree (MD, PharmD, PhD, MSc in Life Sciences, or equivalent); .
- Minimum 2 years of experience in Medical Affairs or clinical/scientific roles, preferably in a field-based setting within healthcare or pharmaceuticals. Neuroscience experience a plus.
- Strong ability to engage in high-quality, evidence-based scientific dialogue with healthcare professionals and medical experts.
- Demonstrated capability in interpreting and communicating complex clinical and scientific data.
- Experience in insight generation, synthesis, and communication to inform strategy.
- Good understanding of pharmaceutical industry regulations, compliance standards, and medical governance.
- Strong planning, prioritization, and territory management skills in a matrix environment.

- High integrity, ethical mindset, scientific curiosity, and strong communication skills.
- Fluent English and Arabic language required
